SKILLS

- Javascript, React.js, Node.js, Express.js, PostgreSQL, Github, HTML, CSS, Python
- English, Spanish and Korean
- Collaboration, Project Management, Relationship Management

PROJECTS

Carry

A delivery platform that allows users to place orders from their favorite luxury retail stores in NYC. Carry was designed to get customers their orders within 3 hours to end-of-day .

- Collaborated with a team of four during a 3-month Capstone event.
- PostgreSQL and express was used to implement sessions and create the back-end database, queries and routes.
- Used Context API for state management.
- Users can add items to their cart without being logged by utilizing express-session to associate the session id with the item and updating the database table.
- Inventory gets updated when the user places an order.
- Material UI and CSS was utilized to enhance the user experience visually.

Greenlist

An official registry, directory and forum for designers and brands to find providers and suppliers of green and reclaim materials to combat the lack of a centralized resource and reduce the impact of fast-fashion.

- Collaborated with a team of four during a week-long Hackathon event.
- PostgreSQL and express was used to create the back-end database, queries and routes.
- Designers/brands can see which materials providers/suppliers have in stock.
- Designers/brands can add/delete extra materials they no longer need.
- Bootstrap and CSS were used to create the formal directory.
-

HoIDING

A micro social media full stack app that integrates a safe space for users by allowing a user to be part of many private groups called "holds" and takes away the fear of being mocked.

- Collaborated with a team of four for a month to create a full stack micro social media app.
- PostgreSQL and express was used to create the back-end database, queries and routes.
- With the help of pg-promise, communication between the database and Node.js was possible.
- Users are able to add non-hold members in the specific hold, see who is part of the hold and see their Hold profile.
- Users can see all the comments made from users who are part of the specific hold. This will differ depending on post, current hold and the hold members.
- CSS was used to make sure the app is visually pleasing by incorporating consistent therapeutic colors.

EXPERIENCE

Uniqlo

New York, NY

Sales Associate

August 2016 - September 2017

- Interacted with approximately 30 customers daily, finding, selecting, making recommendations or responding to inquiries about the products.
- Aided in translating in Spanish and Korean increasing customer loyalty.
- Trained sales Associates on customer service, inventory, and taught Uniqlo's best visual and care practices to all employees.
- Collaborated with supervisors and managers to ensure the floorplan of the store was up to company standards.
